

Summer 2021 - CSCI585 HW5 Rubrics

Q1) [1 point]. Submit your weights.h5 file. Also, create a submittable screengrab similar to the above [showing values for the second dense layer (e.g., dense_12)].

0.5 pt. for submitting weights.h5 file

0.5 pt. for submitting screenshot of any dense layer

Screenshot should display the expanded results of any of the dense layers below weights.h5

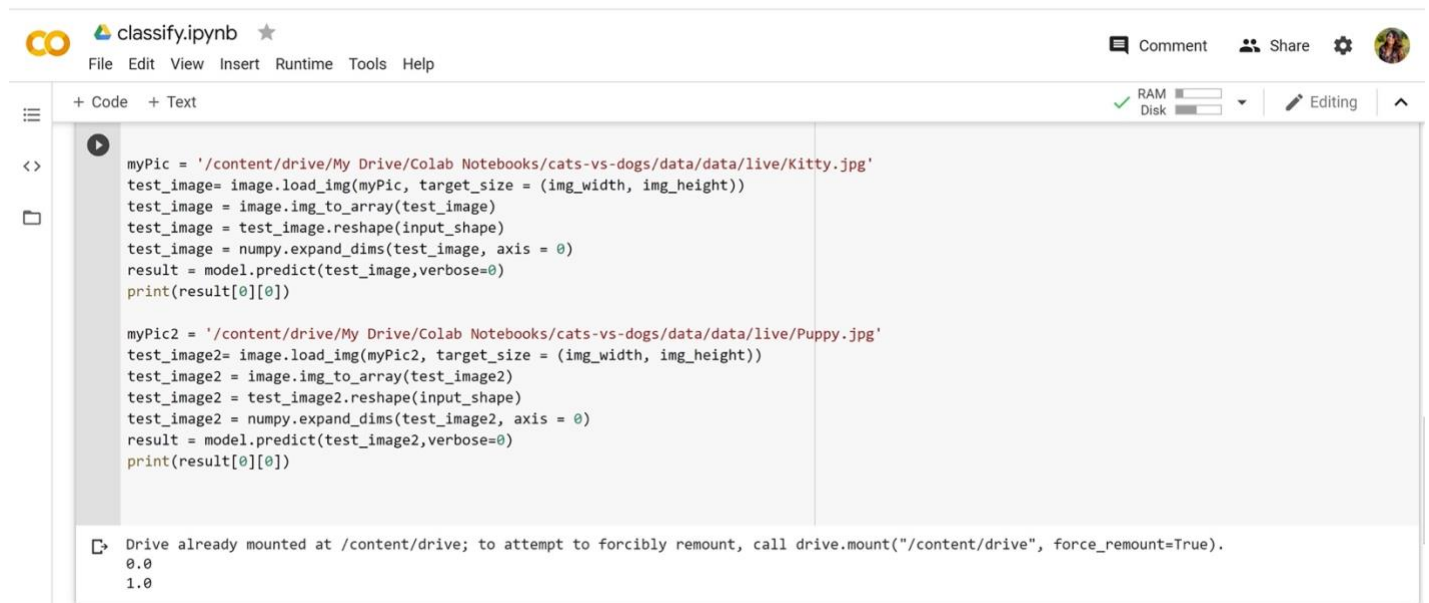

-0.5 pt. for not submitting weights.h5 file

-0.5 pt. if the screenshot is not submitted

Q2) [1 point]. Create a screenshot that shows the [correct] classification (you'll also be submitting your what {1,2}.jpg images with this).

Total 0.5pt (0.25pt for each) for submitting correct what {1,2}.jpg
Total 0.5pt for submitting a screenshot shows the correct classification on what {1.2}.jpg images. (The values with a 20% range are accepted. For example, for classification 1, accuracy > 0.8 should be fine.)

```
myPic = '/content/drive/My Drive/Colab Notebooks/cats-vs-dogs/data/data/live/Kitty.jpg'
test_image = image.load_img(myPic, target_size = (img_width, img_height))
test_image = image.img_to_array(test_image)
test_image = test_image.reshape(input_shape)
test_image = numpy.expand_dims(test_image, axis = 0)
result = model.predict(test_image, verbose=0)
print(result[0][0])

myPic2 = '/content/drive/My Drive/Colab Notebooks/cats-vs-dogs/data/data/live/Puppy.jpg'
test_image2 = image.load_img(myPic2, target_size = (img_width, img_height))
test_image2 = image.img_to_array(test_image2)
test_image2 = test_image2.reshape(input_shape)
test_image2 = numpy.expand_dims(test_image2, axis = 0)
result = model.predict(test_image2, verbose=0)
print(result[0][0])
```

Drive already mounted at /content/drive; to attempt to forcibly remount, call drive.mount("/content/drive", force_remount=True).

0.0
1.0

-0.5pt if the classification result if wrong
-0.5pt if the code is not showing in the screenshot.
-0.25pt if either of the pictures are missing

Q3 [2 points] Create a screenshot that shows the misclassification (you'll also be submitting your myPic.jpg (corgi) and myPic2.jpg (dog-like cat) images with this)

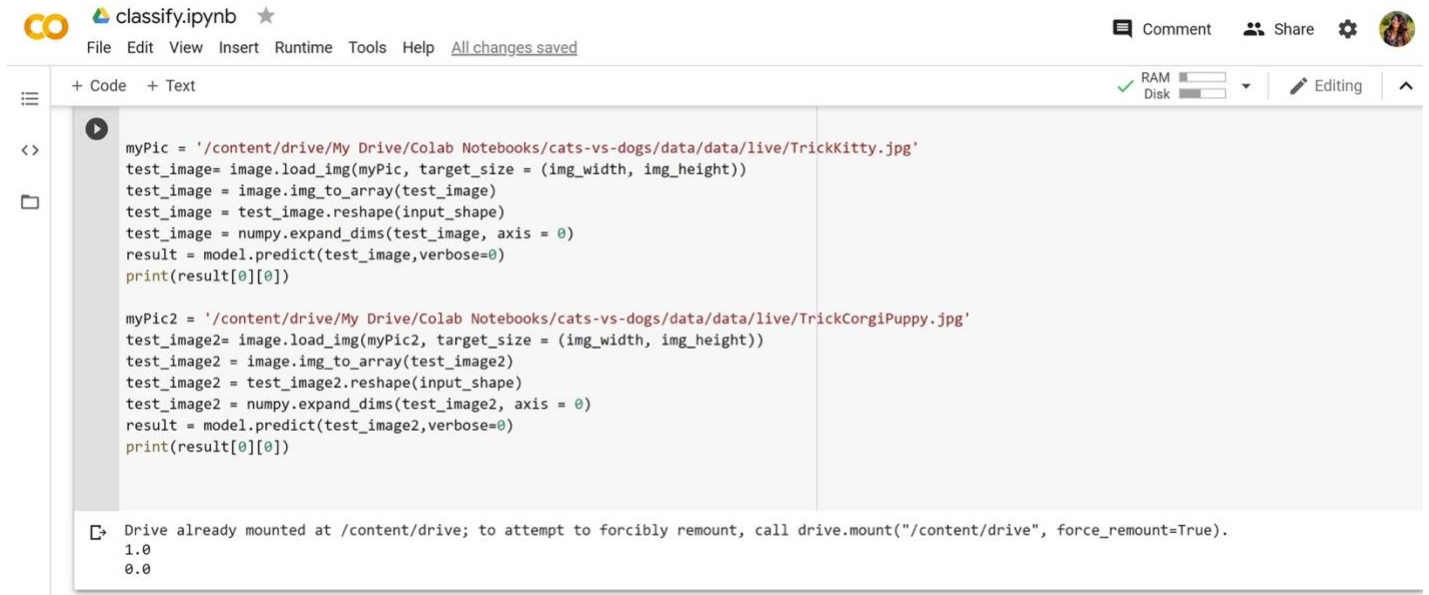

Total 1pt (0.5pt for each) for submitting correct myPic {1, 2}.jpg
Total 1pt for submitting a screenshot that shows the misclassification on myPic {1.2}.jpg images. (The values with a 20% range are accepted. For example, for classification 1, accuracy > 0.8 should be fine.)

Corgi Image (myPic) should be misclassified as 0
Dog-like cat Image (myPic) should be misclassified as 1

-1pt if the classification result if wrong
-0.5pt if the code is not showing in the screenshot.
-0.5pt if either of the images are missing

Misclassification

```

myPic = '/content/drive/My Drive/Colab Notebooks/cats-vs-dogs/data/data/live/TrickKitty.jpg'
test_image= image.load_img(myPic, target_size = (img_width, img_height))
test_image = image.img_to_array(test_image)
test_image = test_image.reshape(input_shape)
test_image = numpy.expand_dims(test_image, axis = 0)
result = model.predict(test_image,verbose=0)
print(result[0][0])

myPic2 = '/content/drive/My Drive/Colab Notebooks/cats-vs-dogs/data/data/live/TrickCorgiPuppy.jpg'
test_image2= image.load_img(myPic2, target_size = (img_width, img_height))
test_image2 = image.img_to_array(test_image2)
test_image2 = test_image2.reshape(input_shape)
test_image2 = numpy.expand_dims(test_image2, axis = 0)
result = model.predict(test_image2,verbose=0)
print(result[0][0])

```

Drive already mounted at /content/drive; to attempt to forcibly remount, call drive.mount("/content/drive", force_remount=True).

1.0
0.0

Q4a. [1 point] On paper, write out a SINGLE equation $f(X_1, X_2, X_3)$ that shows the output Y in terms of the three variables X_1, X_2 and X_3 , and the neurons' weights!

Total 1pt for submitting screenshot of paper showing a SINGLE equation $f(X_1, X_2, X_3)$ that shows the output Y in terms of the three variables X_1, X_2 and X_3 , and the neurons' weights.

-0.25pt each for missing X_1, X_2, X_3 , or weights

-1 for the incorrect equation

-0.5pt for not expressing it as a SINGLE equation (i.e., instead, using placeholder variables that hold partial expressions, use of matrices, etc.)

Solution:

Using the weights in the HW5 page, the equation would be [note that it is a SINGLE, deterministic eqn that is a fn of just X_1, X_2, X_3]:

$$Y = \frac{1}{1 + e^{-\left(0.0076 \cdot \frac{1}{1 + e^{-(7.1933 \cdot X_1 + 6.3338 \cdot X_2 - 3.6390 \cdot X_3)}} + 0.9955 \cdot \frac{1}{1 + e^{-(2.8120 \cdot X_1 + 4.5113 \cdot X_2 - 5.5302 \cdot X_3)}} + 0.9915 \cdot \frac{1}{1 + e^{-(1.4100 \cdot X_1 + 3.3823 \cdot X_2 - 3.5177 \cdot X_3)}} + 0.0068 \cdot \frac{1}{1 + e^{-(4.8385 \cdot X_1 - 3.5587 \cdot X_2 + 2.3474 \cdot X_3)}}\right)}}$$

Note: The equations and values of weights shown above are just samples. Do not deduct marks for different weight values as every student may get different values. Deduct only if anyone of the weights or variables are missing.

Q4b) [1 point] Use the equation you just created, to hand-calculate the classification (on paper!).

Total 1pt (0.25pt for each) for the correct hand-calculated equations.

-0.25 each for wrong calculation to generate the output for [001, 011, 101, 111]

X1	X2	X3	Y
0	0	1	0
0	1	1	1
1	0	1	1
1	1	1	0

 [0.00711077]]
```

Let's say $X_1 = 0$, $X_2 = 0$, $X_3 = 1$, students need to show the calculation step by step to get a result of 0.00718289

$$\text{Equation} = \text{sig}(\text{sig}(x_1 * 1.87817704 + x_2 * -0.23122023 + x_3 * -0.5210761) * -3.67315604) + (\text{sig}(x_1 * 4.9504652 + x_2 * 4.2809186 + x_3 * -7.05394757) * -10.37516912) + (\text{sig}(x_1 * 6.75167107 + x_2 * 7.19644129 + x_3 * -3.07360065) * 11.51972059) + (\text{sig}(x_1 * -2.04108928 + x_2 * 2.68053499 + x_3 * 1.74976253) * -4.76633344)$$

$$1) [X_1, X_2, X_3] * \begin{bmatrix} 1.87817704 & 4.9504652 & 6.75167107 & -2.04108928 \end{bmatrix} = [\text{Hidden } x'_0, x'_1, x'_2, x'_3]$$

$$\begin{bmatrix} -0.23122023 & 4.2809186 & 7.19644129 & 2.68053499 \\ -0.5210761 & -7.05394757 & -3.07360065 & 1.74976253 \end{bmatrix}$$

$$\text{Hidden output } x'_0 = (1.87817704 * X_1 + -0.23122023 * X_2 + -0.5210761 * X_3) = -0.5210761$$

$$\text{Hidden output } x'_1 = (4.9504652 * X_1 + 4.2809186 * X_2 + -7.05394757 * X_3) = -7.05394757$$

$$\text{Hidden output } x'_2 = (6.75167107 * X_1 + 7.19644129 * X_2 + -3.07360065 * X_3) = -3.07360065$$

$$\text{Hidden output } x'_3 = (-2.04108928 * X_1 + 2.68053499 * X_2 + 1.74976253 * X_3) = 1.74976253$$

2) Sigmoid output – hidden layer

$$\text{Sigmoid}(x'_0) = \text{Sigmoid}(-0.5210761) \rightarrow 0.3726$$

$$\text{Sigmoid}(x'_1) = \text{Sigmoid}(-7.05394757) \rightarrow 0.00086$$

$$\text{Sigmoid}(x'_2) = \text{Sigmoid}(-3.07360065) \rightarrow 0.04421$$

$$\text{Sigmoid}(x'_3) = \text{Sigmoid}(1.74976253) \rightarrow 0.85192$$

3) calculate output – output layer

$$\text{Output} = \text{Sig}(Y_0 + Y_1 + Y_2 + Y_3)$$

$$[\text{Sig}(x'_0), \text{Sig}(x'_1), \text{Sig}(x'_2), \text{Sig}(x'_3)] * \begin{bmatrix} -3.67315604 \\ -10.37516912 \\ 11.51972059 \\ -4.76633344 \end{bmatrix} = [Y_0, Y_1, Y_2, Y_3]$$

$$Y_0 = \text{Sig}(x'_0) * -3.67315604 = -1.368617940504$$

$$Y_1 = \text{Sig}(x'_1) * -10.37516912 = -0.0089226454432$$

$$Y_2 = \text{Sig}(x'_2) * 11.51972059 = 0.5092868472839$$

$$Y_3 = \text{Sig}(x'_3) * -4.76633344 = -0.0605347842048$$

$$y_0 + y_1 + y_2 + y_3 = -4.9287885228681$$

$$\text{Sig}(-4.9287885228681) = 0.00718 \text{ which is equal to } [0.00718289]$$

Note: The equations and values of weights shown above are just samples. Do not deduct marks for different weight values as every student may get different values. Deduct only if anyone of the weights or variables are missing.
